

RARE DISEASE AWARENESS

Somerdale Park student council will be holding a fundraiser for 2 “Rare Diseases” while bringing awareness to all rare diseases...All proceeds will go to the associations chosen. ½ will go to CDG and the other ½ will go to Nevus.. Tee shirt order forms are on the next page. We thank you in advance.

-Somerdale Park Student Council

Below is a little about two that hold a special place in our hearts...

CDG: Congenital disorders of glycosylation (CDG) are a large group of rare genetic disorders that affect the addition of sugar building blocks, called glycans, to proteins in cells throughout the body. The addition of glycans to proteins is critical to the healthy function of cells. People with CDG have a wide range of health problems because of this chemical malfunction.

NEVUS: An epidermal **nevus** (plural: **nevi**) is an abnormal, noncancerous (benign) patch of skin caused by an overgrowth of cells in the outermost layer of skin (epidermis). Epidermal **nevi** are typically seen at birth or develop in early childhood. Affected individuals have one or more **nevi** that vary in size
